       }

       Printf ( " present %d, Absent : %d ", i, present, Absent ) i Printf ( " final resul
   }
```

COPY NUMBER: 11

Analyse :

Algorithmique :

- Boucle `while`. Condition `i < N && absent < S`.
- Syntaxe `i` à la fin de printf/return au lieu de `;`. (`return 0 i`).
- Calculs ok.

NOTE FINALE : 10 / 20

Feedback :

- **Appréciation globale** : **Passable**. Etourderies syntaxiques recurrentes (i vs ;).
