           printf("stop");
       }

       if (the student is present)
       {
           printf("session valid");
       }

       else if (the student is absent)
       {
           printf("session cancelled");
       }

   }

   return 0;
}
```

COPY NUMBER: 18

Analyse :

Algorithmique :

- Boucle `for`.
- Logique interne : `if (x < A)` mais `x` non lu (pas de scanf).
- `if (X < A)` lit `student_absent` via scanf ? L'étudiant saisit le nombre d'absents ?? Contresens.
- Condition arrêt `if (A == N)` dans la boucle.

NOTE FINALE : 07 / 20

Feedback :

- **Appréciation globale** : **Insuffisant**.
