

```
include <stdio.h>
int main() {
    int N, A, S;
    printf("Entrez les nombres");
    scanf("%d %d %d", &N, &A, &S);
    while {
        printf("x < A");
        scanf("%d", &x);
        if (x < A) S++;
    }
}
```

```
return 0
```

```
}
```

```
}
```

Copy 28

```
include <stdio.h> int main ( )
{
    int N, A, S;
    Print f ( " Entre les naumbre " );
    Scanf ( " %d %d %d ; N, A, S \n " );
    wahl
    {
        Print f ( " x <A " );
        Scanf ( " %d ; X <A, S> X, i ++ n \ " );
        rutorn 0
    }
}
```

Analyse :

Algorithmique :

- `stndo.h`, `wahl`, `rutorn`. Phonétique ?
- Code inutilisable.

NOTE FINALE : 00 / 20

Feedback :

- **Appréciation globale : Nul.**
