

Input reading: 3pts | Initialization: 3 pts | Loop condition: 4 pts | Counters logic: 4 pts | Stop conditions: 3 | Final output: 3

```

#include <stdio.h>

```

```

int main() {

```

```

    int N, A, S, x, a, p, i; // عدد الفتيات و P عدد الغفور x زدت على التي طنت معرفتها في S

```

```

    scanf("%d%d%d", &N, &A, &S);

```

```

    for(int i=1; i<=N; i++) {

```

```

        printf("Entre the number of attended sessions %d", i);

```

```

        scanf("%d", &x);

```

```

        if (x < A) {

```

```

            a++;

```

```

            printf("absent Students is %d", a); // كل خطوة يقل

```

```

        } else { p++;

```

```

            printf("present Students is %d", p); // شغال اناهم فاشين

```

```

        } if (a == S) {

```

```

            printf("Session cancelled");

```

```

            return 0;

```

```

        } printf("total processed Students is %d", i); // لا أو لانها

```

```

        printf("present Students is %d", p); // تغيير واضع

```

```

        printf("absent Students is %d", a); // في الشقة خرجة من قبل

```

```

        if (a <= S) { // في تنوع كل خطوة

```

```

            printf("Session Valid"); // اذا كان عدد الفتيات اقل من S

```

```

        } else { printf("Session cancelled"); // هنا قلنا قدرو متفحوش

```

```

        } return 0;

```

Copy 19

```
include <stdio.h> int main ( )
{
    int N, A, S, x, i, P = 0, a = 0;
    Scanf ( " %d %d %d ", &N, &A, &S ) ;
    for ( int i = 1, i <= N ; i ++ )
    {
        printf ( " Entre the number of attended sessions %d ", i ) ;
        Scanf ( " %d ", & x ) ;
        if ( x <A )
        {
            a ++ ;

        }

        else
        {
            P ++ ;
            printf ( " present Students is %d \n ", P ) ;
        }

        if ( a == S )
        {
            printf ( " Session cancelled " ) ;
            return 0 ;
        }

    }

    printf ( " total processed Students is %d \n ", i ) ;
    printf ( " present Sudents is %d \n ", P ) ;
    printf ( " abrent Sudents is %d \n ", a ) ;
    if ( a <= S )
    {
        printf ( " Sessio Valed " ) ;
    }

    else
    {
        printf ( " Session cancelled " ) ;
    }

    return 0 ;
}
```

Analyse :

Algorithmique :

- Boucle `for`. Syntaxe `int i=1, i<=N`. Virgule au lieu de point-virgule.
- Logique interne OK.
- Arrêt si `a == S` dans la boucle (avec `return`). Radical mais conforme stop condition.
- Affichages corrects.

NOTE FINALE : 13 / 20

Feedback :

- **Appréciation globale : Moyen.** Erreur syntaxe `for`.
-
