

Input reading: 3pts | Initialization: 3 pts | Loop condition: 4 pts | Counters logic: 4 pts | Stop conditions: 3 | Final output: 3

```

#include <stdio.h>
int main() {
    int i;
    printf("entre the N");
    scanf("%d", &N);
    printf("entre the A");
    scanf("%d", &A);
    printf("entre the s");
    scanf("%d", &s);
    while(i <= N) { i++;
        printf("%d.", N); }
    if(i > A) then {
        printf("%d",
        printf("%d 'the present', i);
    }
    else
        printf("i > s of ");
    return 0;
}

```

Copy 11

```
#include <stdio.h>
int main()
{
    int i;
    printf("entre the N: ");
    scanf("%d", &N);
    printf("entre the A: ");
    scanf("%d", &A);
    printf("entre the S: ");
    scanf("%d", &S);
    while (i <= N)
    {
        i++;
        printf("%d", N);
        if (i > A)
        {
            printf("total present", i);
        }

        else
        {
            printf("S of", i);
        }

    }

    return 0;
}
```

Analyse :

Algorithmique :

- Boucle `while (i <= N)` avec `i` non initialisé.
- Pas de lecture de `x` (séances).
- Comparaisons incohérentes.

NOTE FINALE : 03 / 20

Feedback :

- **Appréciation globale : Très Insuffisant.**
-
