```c
#include <stdio.h>
int main()
{
    int N, A, S;
    printf("N: ");
    scanf("%d", &N);
    printf("A: ");
    scanf("%d", &A);
    printf("S: ");
    scanf("%d", &S);
    int i = 1;
    while (i <N || i == S)
    {
        if (X <A)
        {
            printf("the student is considered absent");
            printf("session cancelled");
        }

        else
        {
            printf("the student is present");
            printf("session valid");
        }

        return 0;
    }

}
```
